### Grade breakdown

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Sprint Process Evidence** | None: there's no backlog, issue board, branches or merge requests, or the team presents the application only. ***0 points*** | Very poor: there's a backlog or board, but the issues were created or closed in a batch near the deadline. Most work was merged into main with no evidence of review, or merge requests aren't linked to issues. ***0.5 points*** | Poor: issues, branches and merge requests exist, but few link to each other, and some stories have no acceptance criteria or story points. Reviews are rare, self-approved or have few comments, and few merge requests links to issues. ***1 points*** | Good: most stories have acceptance criteria and story points. Most work goes through an issue, a branch and a merge request. Reviews are thin, such as approvals with no comments, or 1 or 2 members account for most of the activity. ***2 points*** | Very good: the team can trace a demonstrated feature from its story, through an issue, a branch and a merge request reviewed by another member, to main. Contributions are spread across members. ***3 points*** | Excellent: the team traces any feature it demonstrated, when asked, from a testable, estimated story to main. The board shows issues moving through the sprint. Reviews are substantive, with comments that led to changes. Every member authored and reviewed merge requests. ***4 points*** | At no point did the team show the GitLab issue board, documentation or merge requests. |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Working Features** | None: the team doesn't demonstrate a working feature. It shows nothing, only the starter template (including the Notes example), or slides and code instead of a live product. ***0 points*** | Very poor: the team attempts a Shared Expense Splitter feature, but it fails during the demo or works only partially. It may run from an unmerged branch or be shown only in code. ***0.5 points*** | Poor: one core feature works, such as creating a group or adding an expense. Others are incomplete, shown only through backend output, or produce errors or wrong results, such as shares that don't add up to the expense total. ***1 points*** | Good: several core features work through the UI and give correct results for the cases shown. Minor errors, slow responses, or a feature running from a branch instead of main hold the demo back. ***2 points*** | Very good: the team's Sprint 1 features work end to end through the UI, run from main, give correct results, and match their acceptance criteria. Any problems are cosmetic. ***2.5 points*** | Excellent: everything at Very good, with no errors and reasonable load times. The team shows each feature as a user would use it, ties it to its acceptance criteria, and handles questions about edge cases, such as an expense shared by only part of the group, by showing the product's behaviour. ***3 point*** | Pleasing interface, but some workflows could be streamlined and being able to (optionally) name an expense would be helpful. |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | | | | ***s*** | |
| **Presentation, Teamwork and Q&A** | None: the team doesn't present or delivers no structured presentation and can't answer questions about its work. ***0 points*** | Very poor: the presentation is disorganised and hard to follow, or it runs far under 10 minutes or beyond 12 minutes. One member presents almost everything, and the team can't answer basic questions about its product or process. ***0.5 points*** | Poor: the structure is weak and needs frequent clarification. Speaking time is very uneven, with some members saying little or nothing. Answers are vague, and members can discuss only their own work, if that. ***1 points*** | Good: the presentation is mostly clear and close to the 10–12 minutes. Every member speaks, though not equally. Most questions get accurate answers, but some members struggle with parts they didn't build. ***2 points*** | Very good: the presentation is well organised, easy to follow and within 10–12 minutes. Every member presents a substantive part. Questions to any member get clear, accurate answers about the product and the team's process. ***2.5 points*** | Excellent: everything at Very good, with smooth handovers between members. Each member answers confidently about any part of the team's work, including parts they didn't build, and the team explains the reasons behind its Sprint 1 decisions and what it did. ***3 points*** | No need to introduce all team members at the start. The constant back and forth between slides and demo cost time and created confusion. Went >2 min overtime. |
