Grade	2.40 / 4.00
Graded on	Thursday, 29 October 2026, 2:22 PM

Grade breakdown

Contribution & Evidence	None: the section is missing, it describes only the team's work ("we"), or GitLab contradicts the student's claims. ***0 points***	Very poor: contributions are vague, such as "helped with the backend", with no references to issues, merge requests or commits. GitLab shows little or no matching activity. ***0.4 points***	Poor: some specific contributions, but evidence is thin: one or two references that don't cover most claims, or evidence that only partly matches the repository. Little on how the work fitted into the team's sprint. ***0.8 points***	Good: the main contributions are specific and mostly supported by issue, merge request or commit references that check out in GitLab. Some claims lack evidence, or the link to the team's sprint work is brief. ***1.2 points***	Very good: each contribution is specific and backed by evidence that checks out in GitLab, covering code and non-code work such as reviews, board management or minutes. The section explains how the student's work fitted into the team's Sprint 1 development.	Excellent: everything at Very good, with responsibilities taken on, as well as tasks completed. The student shows how their work affected the team, for example a merge request that unblocked a teammate or a review that caught a defect, and all	- very good, i do understand that you included your reviews in the scrum role/participation section but try to include that in your contribution instead - the scrum role can focus more specifically on what you talked about/did during your meetings and lab checkpoints - that being said, you mentioned that you reviewed other MRs but you should be specific as to what impact you had? what bug did you find? how important was it? how did you & the developer communicate this?

						1.6 points	the evidence matches the repository. ***2 points***

Scrum Role and Participation	None: the section is missing. It doesn't name the student's Scrum role or describe their participation. ***0 points***	Very poor: a textbook definition of the role, such as "the Scrum Master removes impediments", with nothing on what the student did. Meetings and lab check points are missing or mentioned in a phrase. ***0.2 points***	Poor: the role is named, with one general example. Meeting participation is described generally, such as "I attended most meetings", and lab check points are missing or only mentioned. ***0.4 points***	Good: the student describes how they carried out the role, with one or two concrete examples. Meetings and lab check points are both covered, but one is thin, such as attendance noted without what the student contributed. ***0.6 points***	Very good: concrete examples of performing the role in Sprint 1. The section describes how the student communicated progress, blockers and upcoming work at team meetings, and what they contributed at the Week s 2–3 lab check-ins. ***0.8 points***	Excellent: everything at Very good, with honest reflection on how well the student perfomed the role, such as a responsibility they handled well and one they neglected. It also explains how their participation affected the team's decisions or progress.	- you've successfully. stated your role and what you did but a couple of improvements; - please include evidence of this, e.g screenshots of meeting minutes - you only describe 2 meetings in your report, but we would like to know what you did specifically, in every single meeting. - what impact did your actions have on the team? as the product owner, it is your responsibility to make sure that people are not blocked, what actions did you take in order to make sure everyone's productive? - you also mention the use of the issue board, please include evidence of that as well in the appendix

						1 points	
Reflection	None: the section is missing, or it repeats the list of completed tasks with no evaluation. *0 points*	Very poor: reflection is limited to statements such as "everything went well" or "communication could be better", with no causes. There's no change for Sprint 2, or only a general intention such as "I will communicate better". *0.2 points*	Poor: some reflection, but it's mainly about the team, not the student, or about what was delivered, not how the student worked. Causes are generic, and the Sprint 2 change is vague or one of a list of intentions. *0.4 points*	Good: covers what worked, what didn't work and one change for Sprint 2. Some points are specific to the student's own approach, but the causes are thin, or the change is only loosely tied to the Sprint 1 experience. *0.6 points*	Very good: specific, honest evaluation of the student's own approach, with clear causes for what worked and what didn't. One concrete, actionable change for Sprint 2 follows directly from a Sprint 1 problem. *0.8 points*	Excellent: everything at Very good, with a Sprint 1 example behind each point, such as a blocker raised late that held up teammates. The change for Sprint 2 says how the student will tell whether it worked. *1 points*	- with the reflection, we want you to focus on what went well for you, what didn't work for you, as opposed to the entire team. - for example, as the product owner, you can definitely talk about the impact that reviewing MRs had, do you think that it helped your team? is there anything you think you could've done better, in order to make sure that the team moved smoother?
