Grade	6.80 / 10.00
Graded on	Thursday, 29 October 2026, 10:44 AM

Grade breakdown

Scrum Roles, Role Allocation and Minutes	None: the section is missing. There are no roles and no meeting minutes. ***0 points***	Very poor: roles are named with no explanation of who did what, or are missing. Only one or two sets of minutes, or minutes with no decisions or action items, or minutes that look written after the fact (uniform, vague, with no follow-up). ***0.6 points***	Poor: roles are listed but responsibilities are vague. Minutes exist, but well short of two a week or in an inconsistent format, and they record discussion without clear decisions or owners. The report doesn't refer to them. ***1.2 points***	Good: roles and responsibilities are clear. Minutes come close to two a week from Week 2, in a consistent format, and record decisions and action items. Some action items lack owners. ***1.8 points***	Very good: roles and responsibilities are clear and explained, including how work was shared. Minutes are regular and consistent, and record decisions and action items with owners and due dates. Action items that became development work link to issues, and the report draws on the	Excellent: everything at Very good. Each set of minutes has all the required atributes; a member who missed the meeting would know what was decided and what to do next. Minutes follow up earlier action items. The report explains	- please be specific when it comes to action items & its owner, try not to group all the user stories as one and say "each respective user story", be specific, we want someone who has attended the meeting to know exactly what everyone is doing. furthermore, having "as soo as possible" for all the due dates doesn't provide much value or prioritisation so it woul be hard for someone who didn't attend the meeting to know what they should work on fir - you need to reflect on previous action items and minutes, for example you guys mention th due to merge conflicts and poor communication, you guys were delayed, but there doesn't seem to be any detail of that within the minutes & the action items should reflect any delays.

						minutes. ***2.4 points***	how role allocation worked in practice, including any changes made during the sprint and why. ***3 points***

Sprint Planning	None: the section is missing. There are no user stories and no planning. ***0 points***	Very poor: stories are missing their acceptance criteria, aren't written as "As a... I want ... so that..." or can't be read in the report. There are no story points, no Sprint Goal and no visible planning process. ***0.8 points***	Poor: some stories are well formed, but many acceptance criteria are vague or untestable, and stories lack GitLab issue numbers. Points appear without an explained estimation approach. The Sprint Goal, discovery process or backlog is missing or covered in one line. ***1.6 points***	Good: stories are mostly well formed and readable, with issue numbers, points and mostly testable acceptance criteria. There's a clear Sprint Goal. The estimation approach, discovery process or link between the goal and the selected stories is thin, or the backlog isn't prioritised.	Very good: stories are well formed, testable, estimated with GitLab point labels and tagged with issue numbers. The estimation approach and Sprint Goal are clear, and the report explains how the selected work serves the goal. The backlog is prioritised and not pre-assigned to	Excellent: everything at Very good, with the planning process traceable from start to finish. The report shows how the feature list became user stories, how stories were split where needed, and the reasons for its main choices. ***4 points***	- to move into the next band, i would suggest you elaborate what the requirements would b from the user's perspective from a expense splitter -> how that becomes a feature -> what the acceptance criteria AND how do we test it who is responsible for it

				2.4 points	Sprint 2. ***3.2 points***	

Sprint Tracking	None: the section is missing, or it describes tracking with no evidence of any kind. ***0 points***	Very poor: the section claims the team tracked its work, but the only evidence is one or two links or screenshots that show little. There's no sign of review, or merge requests lack comments and links to issues. ***0.6 points***	Poor: a single end-of-sprint board screenshot and a few merge requests, with little link between planned stories and the work done. Reviews are missing or self-approved, and the minutes don't mention progress checks. ***1.2 points***	Good: screenshots or links showing the board or issue history, issues and merge requests show most work going through branches and merge requests. Gaps remain: evidence from only one or two points in the sprint, thin reviews, or some stories that can't be traced to their	Very good: board screenshots or issue history from several points in the sprint show tasks moving through it. Most stories trace through issues and branches to merge requests reviewed by another member. The minutes show progress checked at meetings. ***2.4 points***	Excellent: everything at Very good, with every Sprint 1 story traceable from plan to main. Reviews are substantive, with comments that led to changes. The section explains how the team used the board, meetings and Git to spot and deal with probl	- please link MR & issues as hyperlinks - it wou be nice to see multiple screenshots of the iss board, so yes the empty one is nice, but i wou like one mid sprint with issues in the backlog, progress etc & another one towards the end o the sprint, showing the progress - please show evidence of merge request reviewing, with exa comments

				implementation. *1.8 points*		ems during the sprint, as well as what happened. *3 points*

Velocity	None: the section is missing, or it gives no velocity figure and no discussion. ***0 points***	Very poor: a velocity figure with no supporting story table and no interpretation. ***0.4 points***	Poor: points committed and completed and a story table are present, but there are counting errors, such as partial stories counted or totals that don't match the board. The interpretation is a sentence or two of generic comment. ***0.8 points***	Good: the figures are counted correctly and match the board, and the story table is complete. The interpretation touches on estimation or commitment but stays general, and there's a Sprint 2 velocity figure with little on how the team will use it. ***1.2 points***	Very good: the figures are correct and consistent with the board. The interpretation is specific: it names stories that were larger or smaller than estimated and why, judges whether the team over-committed, and states how much work carried into Sprint 2. It explains how the figure will	Excellent: everything at Very good, with an honest assessment of how consistently the team estimated and what caused the gaps, such as unclear acceptance criteria or setup time. It also names concrete changes to estimation or planning	- pretty good, to move up into the next band, i would've liked you to be more specific about how the sprint 2 tasks are more complex -> th needing extra story points for example with receipt image recognition, you would need to implement OCR -> talk about what this would involve & how this would affect your other planned stories & how you guys would plan around this? what would you guys do differen to accommodate these added complexities?

| | | |

Retrospective	None: the section is missing, or it's only a summary of the features the team built. ***0 points***	Very poor: the section lists outcomes, such as "we finished the expense feature" or "we didn't deliver the frontend", with no causes. One or more of the three areas is missing, there are no actions for Sprint 2, and it doesn't say who facilitated or how long it took. ***0.6 points***	Poor: all three areas appear, but most items describe deliverables, not process, or give generic causes such as "communication could be better". Sprint 2 actions are vague intentions, and the facilitator or duration may be missing. ***1.2 points***	Good: all three areas are covered, with the facilitator and duration recorded. Most items are about process, but the "why" is thin, and some Sprint 2 actions are too general to check. ***1.8 points***	Very good: items focus on process and explain their causes, such as the frontend team being blocked by a late API contract. Each problem leads to a specific Sprint 2 action the team could check, and the facilitator and duration are recorded. ***2.4 points***	Excellent: everything at Very good, with the retrospective's evidence drawn from the sprint itself, such as minutes, the board or merge request history. Each Sprint 2 action names an owner or a way to tell whether it worked, and the section sepa	- you guys were very descriptive in what happened, but it would be nice if you could elaborate more on why things happened, for example, what was the thought process behir keeping the sprint 1 features to be limited (in order to prevent it from happening again) or w wasn't the demo rehearsed? was it a time management issue? if so, how can we mitigat that in the future? - with the sprint 2 improvements, we can be a little bit more specific, what does "consider the user's viewpoint" actually mean, how will you guys d that? you guys need to be more detailed

						rates causes the team controls from those it doesn't. ***3 points***
